

BLOOMAWAY

December 2017

Bloomaway

Innovative Virtual Navigation

Seamless

Bloomaway is a unique and intuitive VR interface allowing users to navigate between and among virtual locations

Virtual

When people step into VR, they want to touch what they see. Bloomaway reduces the need for remote controls and allows the user's hand movement to transport them through time and space.

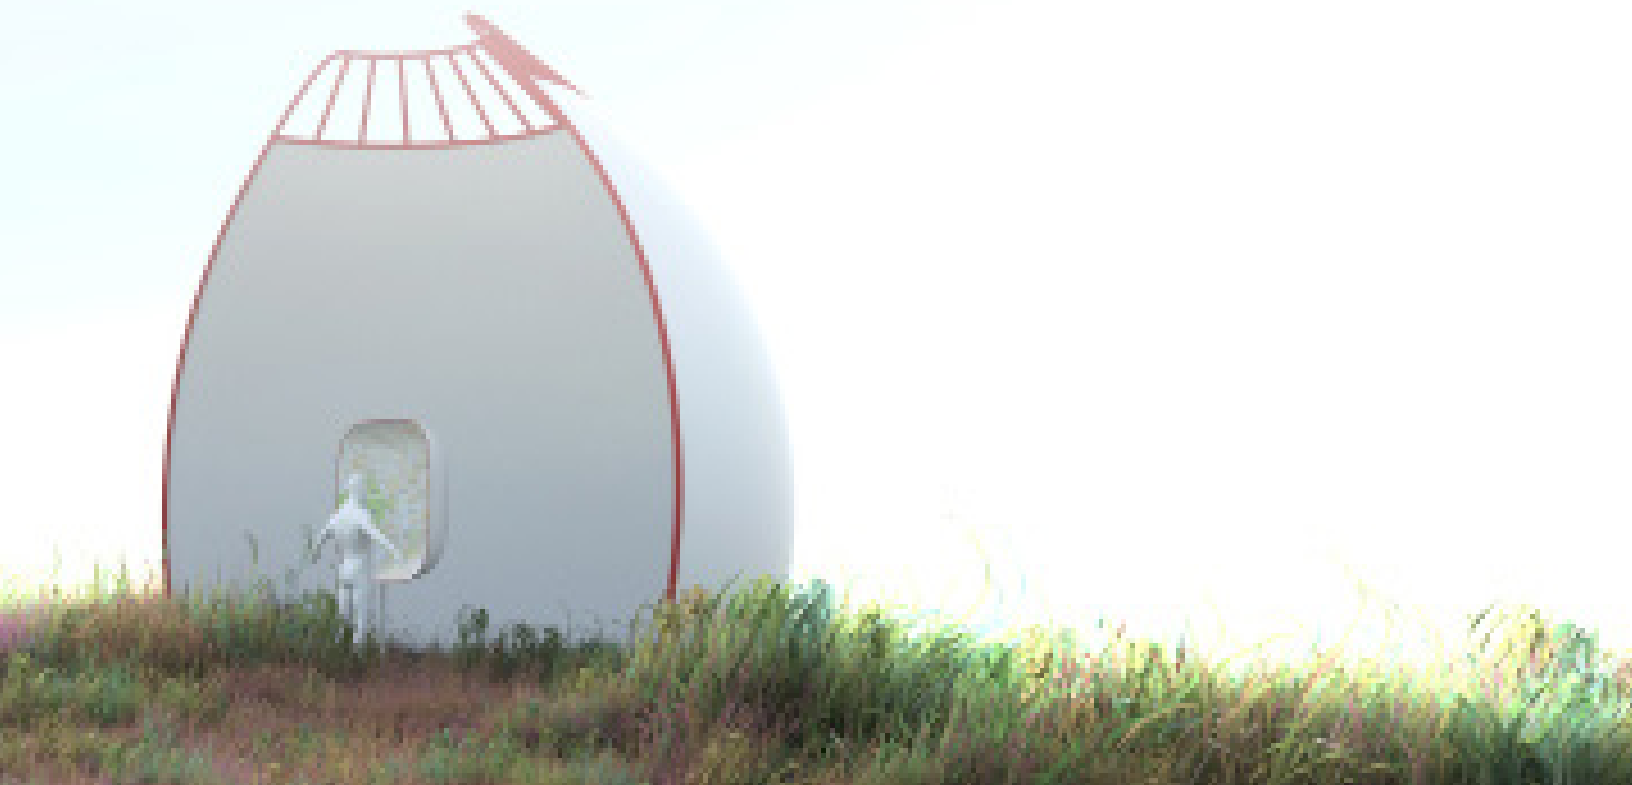

Transport

By allowing the user's body movement and sight line to dictate when and where their selected destination appears, we've eliminated the dizziness that sometimes emerges inside VR.

Executive Summary

Bloomaway is the turn-key solution to experiencing new places in VR - your portal to a library of virtual worlds. Travel abroad, into space, or any place you can imagine. We'll create it in VR.

Business travelers, vacationers, the corporately relocated, retirement groups, and others will seek VR to more efficiently explore locations across the globe. Begin by completing: Creative Specs.
